

Azure Infrastructure and Juice Shop Setup Guide

Max Vilar

Overview

This guide provides a comprehensive step-by-step process to set up an Azure infrastructure for hosting the OWASP Juice Shop application. It includes the creation of the Azure Virtual Machine (VM), networking configurations, and deployment of Juice Shop for learning and security testing purposes. The infrastructure was created with several vulnerabilities on purpose to have these show on the risk assessment at the end.

Section 1: Setting Up Azure Infrastructure

1.1 Create an Azure Virtual Machine (VM)

1. **Access Azure Portal**
 - Navigate to [Azure Portal](#) and log in.
2. **Start Virtual Machine Setup**
 - Go to **Virtual Machines** → Click **Create** → **Azure Virtual Machine**.
3. **Basic Configuration**
 - **Subscription**: Select your subscription.
 - **Resource Group**: Create a new group
 - **VM Name**: Enter a name
 - **Region**: Choose a region
 - **Image**: Select **Windows Server 2022 Datacenter**.
 - **Size**: Use **Standard_B1s** (cost-efficient).
4. **Administrator Account**

- **Username:** Create an admin username.
- **Password:** Use a strong password.

5. Inbound Port Rules

- Allow **RDP (3389)**, **HTTP (80)** and **HTTPS (443)**

6. Deploy VM

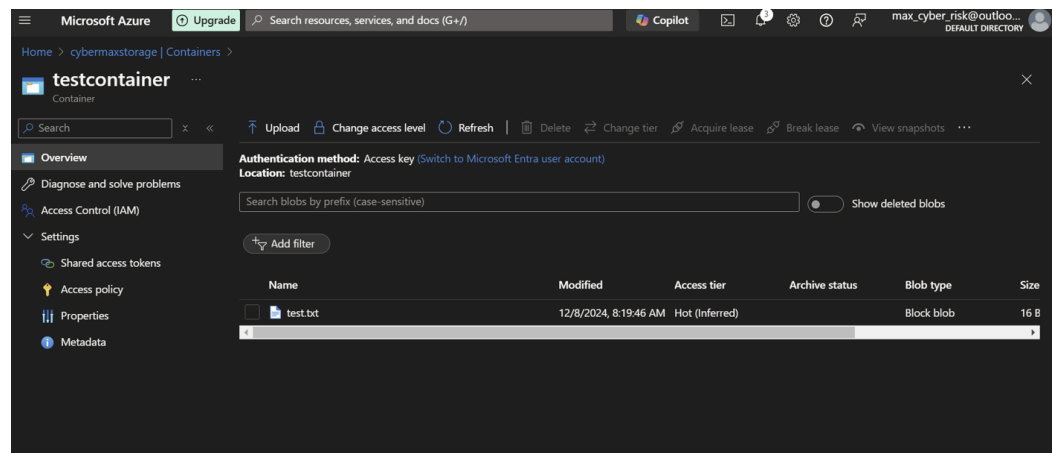

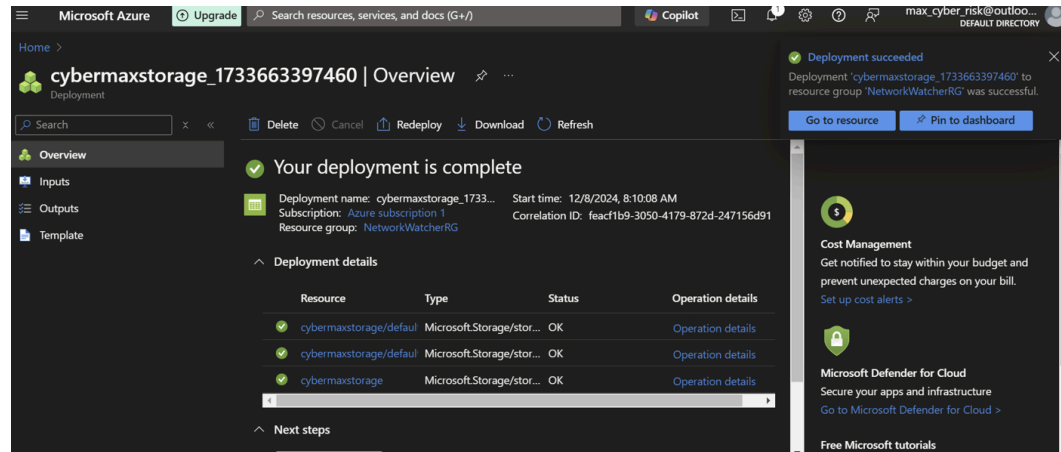

- Review the configuration and click **Create** to deploy.
- When all said is done, you should have the following

| Name | Type | Last Viewed |
|----------------------|------------------------|----------------|
| RiskVM1-ip | Public IP address | 8 minutes ago |
| RiskVM1-vnet | Virtual network | 13 minutes ago |
| Azure subscription 1 | Subscription | 13 minutes ago |
| RiskVM1-nsg | Network security group | 14 minutes ago |
| RiskVM1 | Virtual machine | 15 hours ago |
| RiskVMGroup | Resource group | 15 hours ago |

[See all](#)

7. Storage (Optional)

- I have added storage and a test container, this is not necessary

1.2 Configure Networking

1. Verify Network Security Group (NSG) Rules

- Navigate to the VM's **Networking** tab.
- Ensure the following:
 - **Allow Port 3389**: For RDP access.
 - **Allow Port 3000**: For Juice Shop.
 - Remove unnecessary ports (e.g., SQL Port 1433).

2. Restrict RDP Access

- Modify NSG rules to restrict access to specific IP ranges.

1.3 Software Installation

1. Connect to the VM

- Use RDP with the VM's **Public IP Address**.

2. Install Node.js

- Download from [Node.js](https://nodejs.org/en/) and install the **LTS version**.

3. Install Git

- Download from git-scm.com and install.
-

Section 2: Deploying OWASP Juice Shop

2.1 Clone the Repository

1. Open **Command Prompt** or **PowerShell**.
 - Clone the repository:
`git clone https://github.com/juice-shop/juice-shop.git`
 - `cd juice-shop`

2.2 Install Dependencies

Install required packages:

1. Npm install
2. Wait for the installation to complete.

2.3 Start Juice Shop

Run the application:

1. `npm start`

```
npm start

admin@RiskVM1 MINGW64 ~/juice-shop (master)
$ npm start

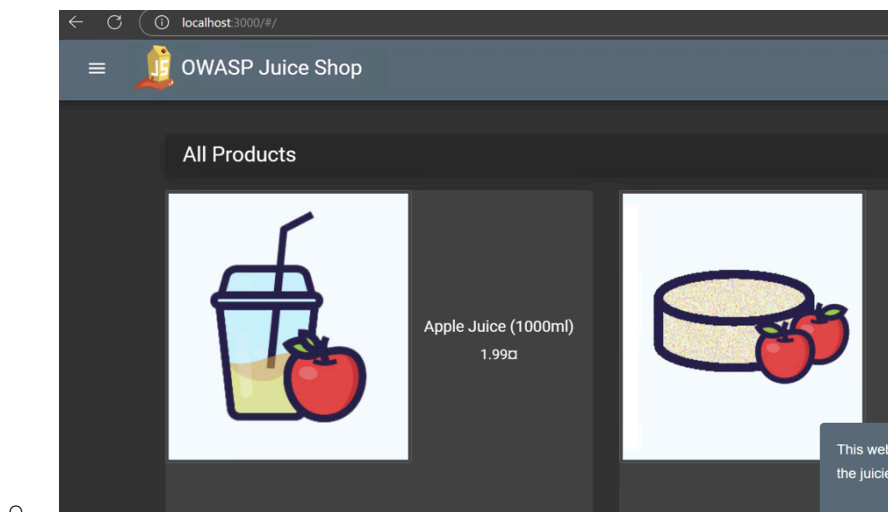

> juice-shop@17.1.1 start
> node build/app

info: Detected Node.js version v18.20.5 (OK)
info: Detected OS win32 (OK)
info: Detected CPU x64 (OK)
info: Configuration default validated (OK)
info: Entity models 19 of 19 are initialized (OK)
info: Required file server.js is present (OK)
info: Required file index.html is present (OK)
info: Required file styles.css is present (OK)
info: Required file main.js is present (OK)
info: Required file polyfills.js is present (OK)
info: Required file runtime.js is present (OK)
info: Required file vendor.js is present (OK)
info: Port 3000 is available (OK)
info: Domain https://www.alchemy.com/ is reachable (OK)
info: Chatbot training data botDefaultTrainingData.json validated (OK)
info: Server listening on port 3000
```

- 2.
3. Verify the application:
 - Open a browser and navigate to <http://<Public-IP>:3000>.

2.4 Configure Firewall

1. **Allow Port 3000**
 - Open **Windows Defender Firewall** → **Advanced Settings**.
 - Create an inbound rule for Port 3000.
2. **Test Connectivity**
 - Access Juice Shop from your local machine.
 - It should look like the following if everything works correctly

Section 3: Securing the Environment

Only do the following if you want to secure the environment, if you want to do a risk assessment with vulnerabilities and risks in the infrastructure, ignore the following.

3.1 Strengthen Password Policies

- Change the admin password to a strong, complex value.
- Enable **Account Lockout Policies** to prevent brute force attacks.

3.2 Enable Azure Defender

- Navigate to **Security Center** and enable **Azure Defender** for Servers.
- Resolve any recommendations provided.

3.3 Monitor and Log Activity

- Enable **Azure Monitor** to track RDP connections and system activity.
- Set up alerts for suspicious activities (e.g., failed login attempts).

Summary

This document provided the step-by-step process for:

1. Setting up Azure infrastructure and configuring the VM.
2. Deploying OWASP Juice Shop for testing.
3. Securing the environment by restricting access, enabling monitoring, and applying best practices.

There are faster ways to set up an azure environment using scripts, however, I wanted to do it manually to learn as much as possible.
